2. Qualified Component Lists

The recommended PMIC for the core power rail may vary from project to project. The customer should evaluate the core current consumption under worst-case conditions, choose the PMIC with proper output current ratings, meet the requirement DVFS and power-up sequence and ramping rate. For details, refer to Table 63 of the *SL1680 Datasheet* (PN: 505-001413-01) and the *SL1680 Dynamic Voltage/ Frequency Scaling Application Note* (PN: 506-001369-01).
